

## Airmaster Environmental Policy

Airmaster offers customers a range of mechanical and other building services: planned maintenance and servicing, emergency service, engineered refrigerant upgrades to the Montreal protocol, equipment refurbishment, installation testing and commissioning, essential and emergency services and testing, energy audits, and control systems engineering. Customers include building owners and managers, developers and property occupiers, many of which rely solely on Airmaster to ensure continuation of supply of these services: 24 hours a day, 7 days a week, 365 days a year.

The directors, management, employees and subcontractors commit to minimising the impact of our business operations on the natural environment, and recognise the obligations of being part of the wider social community.

Accordingly, we have implemented an environmental management system modelled on the requirements of AS/NZS ISO 14001, to provide a framework for continuous improvement through regular review of environmental objectives and targets. These objectives include pollution prevention, waste minimisation, energy and resource efficiency, and compliance with environmental legislation and regulations applicable to our industry.

Staff at all levels have been and will continue to be involved in the development and implementation of our environmental management system.

This policy is documented and communicated to all employees, and responsibilities have been established for its implementation and maintenance. Individual commitment to and ownership of our environmental performance is fostered within the company.

AIRMASTER promotes environmental responsibility by encouraging suppliers and clients to adopt environmental management systems. Our policy is available to clients, suppliers and the public.
